

# Clueless or not????

Plants have many secrets but they give away many clues as well - what are some clues that could help you find out more about the plant you are looking at?

List and draw your features here

*\* Please don't pick your specimen from the plants instead look around on the ground for plant material*

Research section

What is the name of your plant? \_\_\_\_\_

What other information were you able to find out about your plant?  
For example what conditions does it like and where are you likely to  
find it in a natural setting?
